## What is IGSuite?

It's not easy to explain all suite features in a short way. IGSuite is an open source web-based groupware suite. These are some of the features:

- Contact CRM management
- Webmail
- full-featured and shared Calendar
- Digital documents archive
- ToDo management
- Fax system
- Wiki
- Project management
- Preferences per user
- PDA interface
- Available in different languages
- Different skins and layout
- Multiplatform (Linux & Windows)

... and more!

## IGSuite it's free and free

IGSuite is available as free software, complete with source code and licensed under the [wikipedia:GNU General Public License]. What does this mean? The whole stuff is free, not only as in 'free use', but as in 'free speech' as well.

## Why IGSuite?

Simply, because IGSuite is better than every other open-source web-based groupware available. We joke... IGSuite was born in 1998 when there wasn't any valid webbased groupware system. We wanted a complete groupware system, so we decided to program our own.
